

# Ruby on Rails: Template Engine with Slim and Haml: Learn how to use properly the two most famous template engine.

Template engines or template systems are a technology used to separate data from the view template server, increase the flexibility of the visual part and easing the code reuse. The most used, currently, for the Ruby language are haml, slim and mustache. The Ruby on Rails framework already comes with the templating system ERB, but many prefer to change it, due to performance issues, documentation or complexity.

who are interested in using the template engines to improve the optimization of ERB and HAML are the most popular template engines within the Rails To help others here is a brief comparison of all three: ERB-vs-HAML-vs-Slim 2.

Pros Simple learning curve Easy to figure out what a given tag is doing Not white I see often that people are not aware of the importance of rendering views, and especially partials, in the proper way in Rails. I will now show we are able to render 0.291 of those views in a second. Lets get to the most important part of this post: the usage of partials. Bonus: other template engines.
